Fiera Capital Global Asset Allocation

MONTHLY UPDATE: AUGUST 2022

Jean-Guy Desjardins

Executive Chairman of the Board
& Co-Lead Global Asset Allocation

Candice Bangsund, CFA

Vice President &
Co-Lead Global Asset Allocation

The mood in the market improved in July amid speculation that a slowing global economy will prompt central banks to pivot their focus and cool the scale of rate hikes to tame decades-high inflation, which sparked a rally in both stocks and bonds. Investors also cheered some better-than-feared U.S. earnings results that helped to dispel some of the worst recession fears and provided some reprieve for equity investors last month.

FINANCIAL MARKET DASHBOARD

	JULY 29, 2022	JULY	YTD	1 YEAR
EQUITY MARKETS		% PRICE CHANGE (LC)		
S&P 500	4130	9.11%	-13.34%	-6.03%

COMMODITIES		% PRICE CHANGE		
WTI Oil (USD/bbl)	98.62	-6.75%	31.13%	33.36%
Copper (USD/pound)	3.57	-3.80%	-19.94%	-20.28%
Gold (USD/oz)	1762.90	-2.46%	-3.59%	-2.74%

Global equity markets generated positive results in July as the environment of declining bond yields provided a tailwind for stocks. The MSCI All Country World advanced +6.9%, with developed markets (+7.9%) leading the charge and outperforming their emerging market peers (-0.7%). Regionally speaking, the S&P 500 gained +9.1%, while the S&P/TSX also generated positive performance (+4.4%) but underperformed its developed market peers given the monthly retreat in commodity prices. Looking abroad, international developed stocks gained +4.9%, while the emerging market benchmark bucked the global trend and declined for the month, owing mainly to a sharp decline in Chinese equities.

Fixed income markets also generated positive results as signs of softer economic activity spurred traders to rein-in their wagers for aggressive central bank tightening. The closely-monitored 10-2 year yield curve inverted, highlighting the growing fear among market participants that a recession may be on the horizon. The U.S. 10 year treasury yield fell by 36 basis points to 2.65% (a three-month low) and the 2 year treasury yield fell by 7 basis points to 2.88%. Similarly in Canada, the 10 year government bond yield fell by 61 basis points to 2.61%, while the 2 year yield fell by 13 basis points to 2.96. For the month, the Barclays US Aggregate bond index rose 2.4%, while the FTSE Canada Bond Universe gained 3.9%.

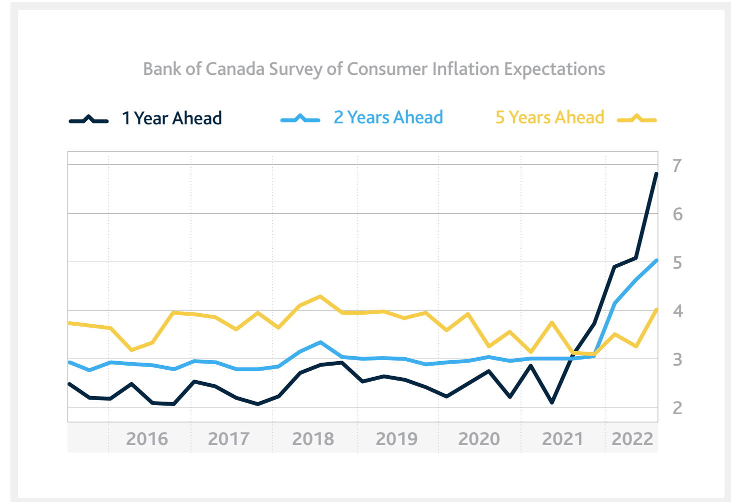
The US dollar strengthened in July, with the DXY index hitting a 20-year high. Gains in the US dollar were mainly visible against the euro, with the euro's decline perpetuated by a weak European economy, unfavorable interest rate differentials as the European Central Bank lags the Federal Reserve in its tightening campaign, and Europe's energy crisis.

In commodity markets, oil saw another volatile month marked by escalating concerns over a looming economic slowdown, with lingering growth fears largely overshadowing a squeeze of the physical oil market, in part due to upended trade flows from Russia. Gold also retreated. While high inflation and growth threats typically aid bullion, its haven status was sidelined by a persistently stronger greenback. Finally, copper tumbled lower as fears of a global recession weighed on the demand outlook for the metal seen as an economic bellwether due to its wide range of uses.

Economic Overview

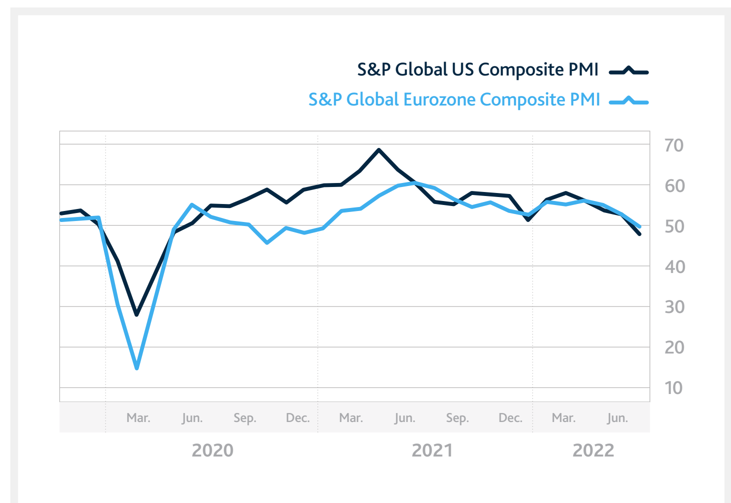
CANADA

The latest Bank of Canada Survey of Consumer Expectations (CSCE) showed that that consumers' inflation expectations rose notably across all time horizons in the second quarter, a worrisome development that has underscored the urgency for the Bank of Canada to act. Indeed, the Bank of Canada surprised the market and lifted the overnight rate by 100 basis points to 2.5% at the July gathering. The tone of the communiqué was unambiguously hawkish, with even greater emphasis placed on inflation momentum, excess demand, and the robust labor market versus the June gathering. Specifically, the central bank noted that the economy has moved further into excess demand, highlighting the record low in the unemployment rate, rising wages, and widespread labour shortages. Critically, the BoC's focus on the inflation front has shifted to domestic factors as increasingly important drivers of inflation, rather than blaming the inflationary shock on global disruptions – reinforcing lingering concerns that the Bank of Canada will have a difficult time wrestling inflation back down to target.



INTERNATIONAL

The S&P Global Purchasing Manager Indices (PMI) sent an ominous signal about economic activity in July and signaled that the global economy lost some momentum at the beginning of the third quarter. The Eurozone Composite index of factory and services activity dropped into contractionary territory (at 49.4 from 52.0). The manufacturing index dropped below the 50 boom-bust line (to 49.6 from 52.1), while the deceleration in service sector activity was more pronounced than anticipated (at 50.6, down from 53.0). Similarly in the US, the Composite PMI fell into contraction terrain in July, collapsing from 52.3 to 47.5. The weakness was concentrated in the services sector (47.0, down from 52.7), while the manufacturing index eased to 52.3 (from 52.7). These results highlight the downside risks facing developed market economies as central banks aggressively raise interest rates to tame rampant inflation. Notably, the challenge of cooling the economy enough to stem inflation but not so much as to tip into recession is becoming increasingly challenging.



EMERGING MARKETS

The Chinese economy lost some momentum in the second quarter and grew at the slowest pace since the country was first hit by the coronavirus outbreak two years ago. GDP growth slowed dramatically to 0.4% y/y in the second quarter from 4.8% y/y in the first quarter. Regrettably, it would appear that the deterioration in economic activity extended into the third quarter, with recent Covid outbreaks and China's strict Covid Zero policy exacerbating already-weak domestic and global growth conditions. In a surprise development, the Official Chinese Manufacturing PMI contracted in July, falling to 49.0 (from 50.2 in June). The non-manufacturing PMI, which measures activity in the construction and services sectors, continued to expand, albeit at a weaker pace. Looking ahead, caution is warranted. While stimulus from the government should support a rebound in investment and production, consumer spending may have weakened again at the start of the third quarter due to fresh virus outbreaks and tightened containment measures in July.

Economic Scenarios

Main Scenario | Deep Recession

Probability **50%**

In our high probability scenario, stubbornly elevated inflation that shows little sign of abating triggers an overly-aggressive monetary tightening event that sparks a recession. The depth and duration of the recession hinges on how persistent inflation proves to be, and on how much pain policymakers are willing to inflict on the economy in order to bring inflation down to levels deemed acceptable. In this calamitous scenario, central banks look to restore their inflation-control credibility after waiting too long to address mounting price pressures and tighten monetary policy too far, too fast – regardless of the economic fallout. The Federal Reserve has prioritized tackling inflation at all costs, and will not come to the rescue of the economy should inflation expectations spiral higher. As such, policymakers are unlikely to pause the rate hike cycle until they see convincing evidence that inflation is coming down, which ultimately means that the Federal Reserve will be hiking interest rates well into economic weakness, making way for a "Deep Recession."

Scenario 2 | Shallow Recession

Probability **30%**

In this less severe recessionary scenario, inflation expectations de-anchor to the upside and force central banks to raise rates at an expeditious pace, which inadvertently pushes the economy into a recession as policymakers act in order to dampen demand for goods, services, and labor. However, interest rates peak at a lower rate versus the "Deep Recession" scenario – while the economic fallout is less damaging in the "Shallow Recession" scenario given the relatively robust underlying economic fundamentals heading into the downturn. Critically, financial imbalances that exacerbated past recessions are now absent, while consumers, banks, and the housing market are all better positioned to weather economic turbulence than they were ahead of the Global Financial Crisis of 2007-2009.

Scenario 3 | Stagflation

Probability **20%**

While central banks ramp-up their plans to normalize monetary policy in response to decades-high inflation, interest rates fail to breach "restrictive" terrain that would typically spark an outright contraction. Still, the global economy slows to below-potential levels. The speed at which inflation moderates will determine whether the Federal Reserve can temper its hawkishness and in turn avert recession. This scenario assumes that supply-demand imbalances resolve themselves faster than expected and inflation peaks in the near-term as the rotation in demand from goods towards services curtails pricing pressures, while a recovery in labor force participation and an influx of low-skilled labor constrains wage gains. This paves the way for the Federal Reserve to pause its tightening campaign and ultimately allows the U.S. economy to escape recession.

IMPORTANT DISCLOSURES

Fiera Capital Corporation ("Fiera Capital") is a global independent asset management firm that delivers customized multi-asset solutions across traditional and alternative asset classes to institutional, retail and private wealth clients across North America, Europe and key markets in Asia. Fiera Capital Corporation trades under the ticker FSZ on the Toronto Stock Exchange. Each affiliated entity (each an "Affiliate") of Fiera Capital only provides investment advisory or investment management services or offers investment funds in the jurisdictions where the Affiliate and/or the relevant product is registered or authorized to provide services pursuant to an exemption from registration.

This document is strictly confidential and for discussion purposes only. Its contents must not be disclosed or redistributed directly or indirectly, to any party other than the person to whom it has been delivered and that person's professional advisers.

The information presented in this document, in whole or in part, is not investment, tax, legal or other advice, nor does it consider the investment objectives or financial circumstances of any investor.

Fiera Capital and its Affiliates reasonably believe that this document contains accurate information as at the date of publication; however, no representation is made that the information is accurate or complete and it may not be relied upon. Fiera Capital and its Affiliates will accept no liability arising from the use of this document.

Fiera Capital and its Affiliates do not make recommendations to buy or sell securities or investments in marketing materials. Dealing and/or advising services are only offered to qualified investors pursuant to applicable securities laws in each jurisdiction.

Past performance of any fund, strategy or investment is not an indication or guarantee of future results. Performance information assumes the reinvestment of all investment income and distributions and does not account for any fees or income taxes paid by the investor. All investments have the potential for loss.

This document may contain "forward-looking statements" which reflect the current expectations of Fiera Capital and/or its Affiliates. These statements reflect current beliefs, expectations and assumptions with respect to future events and are based on information currently available. Although based upon what Fiera Capital and its affiliates believe to be reasonable assumptions, there is no guarantee that actual results, performance, or achievements will be consistent with these forward-looking statements. There is no obligation for Fiera Capital and/or it Affiliates to update or alter any forward-looking statements, whether as a result of new information, future events or otherwise.

Strategy data such as ratios and other measures which may be presented herein are for reference only and may be used by prospective investors to evaluate and compare the strategy. Other metrics are available and should be considered prior to investment as those provided herein are the subjective choice of the manager. The weighting of such subjective factors in a different manner would likely lead to different conclusions.

Strategy details, including holdings and exposure data, as well as other characteristics, are as of the date noted and subject to change. Specific holdings identified are not representative of all holdings and it should not be assumed that the holdings identified were or will be profitable.

Certain fund or strategy performance and characteristics may be compared with those of well-known and widely recognized indices. Holdings may differ significantly from the securities that comprise the representative index. It is not possible to invest directly in an index. Investors pursuing a strategy like an index may experience higher or lower returns and will bear the cost of fees and expenses that will reduce returns, whereas an index does not. Generally, an index that is used to compare performance of a fund or strategy, as applicable, is the closest aligned regarding composition, volatility, or other factors.

Every investment is subject to various risks and such risks should be carefully considered by prospective investors before they make any investment decision. No investment strategy or risk management technique can guarantee returns or eliminate risk in every market environment. Each investor should read all related constating documents and/or consult their own advisors as to legal, tax, accounting, regulatory, and related matters prior to making an investment.
